DMR Association announces completion of three interoperability testing sessions

LONDON, UK – 04 September 2012 – The Digital Mobile Radio (DMR) Association today announces the completion of three further successful DMR interoperability test sessions. Two sessions were for DMR Tier II (conventional operation) and the third session for Tier III (trunked operation). The Tier II tests took place between Motorola Solutions and Hytera Communications, and Selex Elsag and EMC spa. The Tier III session took place between Hytera Communications (infrastructure) and Tait Communications (terminals).

The completion of these tests brings the total number of DMR bilateral test sessions completed to 10 and the number of radio manufacturers that have participated in test sessions to 7.

Tom Mockridge (Motorola Solutions), chair of the DMR Association Technical Working Group said "announcement of the interoperability tests for both Tier II and Tier III products demonstrates the commitment of the radio industry to DMR as the digital technology of choice for professional users, and the leading role DMR products play in the market place. The success of DMR is based on the technology's strengths of ease of migration from analogue, more effective use of spectrum, efficient use of infrastructure compared to FDMA, and the flexible and innovative features available from a 2-slot TDMA approach".

DMR Tier II mandatory features tested were: Group Call, Individual Call (PATCS), Individual Call (OACSU), All Call and Emergency Call.

DMR Tier II optional features tested were: Call Alert, Radio Check, Remote Monitor, Emergency Alarm and Radio Enable/Disable.

DMR Tier III mandatory features tested were: Registration, Single Site Talk Group Voice Call Service, Individual Voice Call Service using OACSU on single frequency pair, Individual Voice Call Service on single site using OACSU and FOACSU, Control Channel Hunting, Single Site Short Data Message (text).

DMR Tier III optional features tested in the session were: Multisite Talk Group Voice Call Service, Individual Multisite Voice Call Service using OACSU and FOACSU, and Multisite Short Data Message (text).

Details of specific products and features tested in the sessions are available at: www.dmassociation.org

About DMR

DMR (Digital Mobile Radio) is a globally-available open digital radio standard for Professional Mobile Radio users, developed by the European Telecommunications Standards Institute (ETSI).

About the DMR Association

The DMR Association is focused on building on the success of the DMR standard through a combination of interoperability testing, certification, education and awareness. The Association also seeks to ensure that buyers of DMR technology gain value through the competition and choice derived from products built to an open multi-vendor standard.

The DMR Association includes members representing a broad cross-section of the industry, including some of the world's leading device and network suppliers. Members of the DMR Association include Avtec, CML Microcircuits, Eastern Communications, EMC S.p.A, Funkwerk Koelleda, Fylde Micro, Hytera, Icom, Kenwood, Kirisun, Larimart, Motorola Solutions, Omsk Manufacturing Association, Radio Activity, RADIODATA, SELEX Elsag, Sepura, Simoco, Tait Communications, Vertex Standard, Aeroflex, Anritsu, Elcomplus, Etherstack, fjord-e-design, Neocom Software, Omnitronics, SafeMobile, Shanghai 3G, Unicom, Wuhan, Advent Ltd, Atlantic Telecommunications, BriCom Solutions, CIM Concepts, Democom, ESP Wireless, Fisher Wireless Services, Gencom, Pro-Tec Mobile Communications, Rayfield Communications, Repeater Network LLC, and Saia Communications.
